Course Description

This course will survey the scientific study of mental life and the mental functions that underlie human experience, thought, and action. The emphasis is on cognitive processes and social interactions characteristic of adults. However, research on nonhuman animals, as well as biological, developmental, and pathological processes, will be introduced as relevant. This course, or its equivalent, is a prerequisite for admission to most upper-division courses in the Department of Psychology. Psychology 1 (or its online equivalent, Psychology W1) is required for prospective majors in Psychology, and is intended for lower-division students (freshmen and sophomores).

Course Credits

Three (3) semester hours (approximately 45 hours of class time)

Prerequisites & Workload

There are no prerequisites for this course. Anyone with a college-preparatory high-school diploma should be able to understand the material.

In order to do well in the course, however, students should be prepared to put in some time. Traditionally, college courses assume that students devote two to three hours of study outside class for every one hour in class. In the summer session, there are six (6) 1-hour lectures per week. Following the "industry standard", then, students should be prepared to put in at least 12 hours per week outside of class.
Instructor Information, Contact, Office Hours, & Communication

Course Instructor

John Kihlstrom

Professor Emeritus, Department of Psychology

Richard and Rhoda Goldman Distinguished Professor, Undergraduate and Interdisciplinary Studies, 2013-2017

Tolman Hall, Room 3333

Telephone: (510)-643-3928

E-mail: jfkihlsrom@berkeley.edu

Required and Recommended Readings

Students should purchase two items for the course.

1. The textbook, Introduction to Psychology (Cengage, 11th ed., 2017), by James W. Kalat, is required: It is available from the ASUC Bookstore, and other booksellers, both online and brick-and-mortar. Be sure to purchase Kalat's book, and be sure to purchase the 11th edition; other sections of Psychology 1 and 2 may use different texts.

Approximate price: $270 hardcover (other formats may be available). At the ASUC Bookstore, the text is bundled with MindTap, a browser-based, customized, “Personal Learning Experience” including readings, study tools, videos, homework, quizzes, and other activities. MindTap is available as a resource for students taking the course, but it is not required. For details, see the Cengage website.

2. ZAPS 2.0: The Norton Psychology Labs, an online digital resource by Ton De Jong and colleagues, allows you to experience various psychological phenomena firsthand, via demonstrations programmed by a team of Dutch psychologists (hence the sometimes awkward English) and presented over the Internet (see below for details). You will be required to complete a selection of these exercises during this course. ZAPS 2.0 is an online resource. The registration code for this website must be purchased separately through the publisher’s website: https://digital.wwnorton.com/zaps2. Approximate retail price: $35.00.

- Point your browser to the ZAPS 2.0 “landing page”: https://digital.wwnorton.com/zaps2.
  - Click on the big “Z” button on the lower left corner of this page.
  - Click on the big green button labeled “Sign In, Register a Code, or Purchase Access”.
  - Select “No, I need to register, purchase, or sign up for trial access.
  - Click on the green box that says “Register, Purchase, or Sign Up for Trial Access.
  - Enter your name, school email (e.g., JohnSmith@berkeley.edu), and create a password.
    - Enter your name as you are registered for this course, with your last (family) name first – e.g., “Kihlstrom, John F” or “Xi, Jinping”.
    - Your password must be at least 8 characters long, and must contain at least 1 upper-case letter.
  - Select “I want to purchase access”.
    - Do Not sign up for “21 days of free trial access”.
  - Click on the green box that says “Show Purchasing Options”.
  - When prompted for a “Student Set ID”, enter 43689.
• This is important. Without the proper Student Set ID, you will not receive appropriate credit for completing the ZAPS exercises.
• If you cut and paste the Student Set ID into a webpage, be sure not to enter the leading space ( ) or the following period (.). Otherwise, your Student Set ID will be incorrect, and you will not receive appropriate credit.

**Schedule for Summer 2018**

The schedule shown on the following pages is based on six 1-hour lectures weekly, except for days devoted to midterm exams. For convenience, the schedule conforms to a Tuesday-Wednesday-Thursday format. The July 4 holiday may fall on a nominal “class day”. However, all lectures are available all of the time, from the very beginning of the 8-week summer session, so that students can complete lectures at their own pace (and not spoil the holiday!). Assignments are due, and exams will be administered, on the dates indicated.

The entire course is delivered online, employing the [Canvas learning management system](https://canvas.berkeley.edu). You will need to authenticate with a CalNet ID. Your access to Canvas will terminate one week after the end of the summer session, after the final exam has been administered.

You must log in to Canvas either the Monday or Tuesday of the first week of the Summer Session. For details, see the Orientation materials distributed to all registered students by Berkeley Summer Sessions.

The course is divided into 12 topical modules, each covering a large segment of psychology. A typical module consists of about 4 lectures (some more, some less). You access these modules by clicking on the “Module” link in the Canvas navigation bar. Each module begins with a video overview, followed by one or more lectures.

Here is the schedule of events for Summer 2018:
Module 1: Introduction

**Supplemental Materials**

A set of Lecture Supplements is posted to the Canvas course site. These are, essentially, written versions of lectures that I would give if this course occupied two semesters (or maybe two years), instead of just one. The Supplements also include some essays I have written (or in some cases co-authored) on general-interest topics within psychology -- again, you can think of them as general-interest lectures. Students will not be held responsible for additional material in the lecture supplements, beyond what is in the lectures actually delivered online, but those who intend to major in Psychology may find them informative and useful. The lecture supplements are updated throughout the semester.

You’ll find a link to the Lecture Supplements on the Canvas navigation bar.

**Online Videos**

Canvas also contains links to a number of other supplementary materials, including a number of videos, mostly produced by Annenberg Media, a project of the Annenberg Foundation that produces video resources in conjunction with the Public Broadcasting System. None of these are required, and some of them are a little dated, but all of them are interesting.
• *Discovering Psychology*, a televised introduction to psychology hosted by Prof. Philip Zimbardo of Stanford University (a legendary teacher of introductory psychology), first presented on PBS in 1990 and updated in 2001 (26 half-hour videos).

• *The Brain*: Teaching Modules, drawn from *The Brain*, a series presented on PBS in 1997 (32 videos 5-20 minutes in length).

• *The Mind*: Teaching Modules drawn from *The Mind*, a series presented on PBS in 1999 (35 videos 5-20 minutes in length).

• *Seasons of Life*, a telecourse on developmental psychology, first presented on PBS in 1992 (5 one-hour videos and 26 half-hour audios).

• *The World of Abnormal Psychology*, another telecourse, first presented in 1992 (13 one-hour videos).

• *Against All Odds: Inside Statistics*, yet another telecourse, hosted by psychologist Teresa Amabile, and hands down the best introduction to probability and statistics ever (26 half-hour videos).

• *Seeing Beyond the Obvious: Understanding Perception in Everyday and Novel Environments*, produced by the NASA Ames Research Center and the University of Virginia covers basic issues of depth perception and perceptual issues that arise in novel environments such as high-speed flight and microgravity.

To view these videos, click on “Supplemental Materials” in the various modules.

**Midterm and Final Examinations**

There will be two midterm examinations and a final. Due to the size of the class, all examinations will be in multiple-choice format. Midterms will be administered online, via Canvas, on dates announced in the syllabus, and are noncumulative. The final exam is partly cumulative, but will include a portion covering topics not previously examined. By UC Berkeley policy, the final exam must be administered on campus, though it is possible to arrange for a proctored exam to be administered off-campus. For Summer 2018, the final exam is scheduled for **Friday, August 10, 2018, 9:00 AM - 12:00 Noon PST**, in a room to be announced.
Students whose University or personal obligations may conflict with a scheduled exam should consult with the instructor in advance. In particular, students should plan their end-of-session travel schedules to permit them to take the final exam at the scheduled time. The final exam will not be rescheduled.

Students who are unable to take the final will need to arrange for an approved proctor to administer the exam off-campus. You can review the Finding a Proctor Tutorial to learn how to obtain a qualified proctor. Summer Sessions’ student support staff will manage the off-site proctor approval and tracking process. For questions email summer_online_support@berkeley.edu. The deadline for finalizing these arrangements is July 15, 2018 PST.

If you have a personal emergency that prevents you from taking an exam at the scheduled time, leave a telephone or E-mail message with the instructor, take care of whatever the problem is, and then consult with the instructor as soon as possible afterwards.

Examinations are computer scored. Requests for hand rescoring of any examination must be received within one (1) day of the posting of scores for that exam to the course website.

Feedback concerning exams is available, and also contains copies of old exams. To access these materials, click on "Exam Information" in the left navigational menu.

**Discussion Postings**

In order to foster a sense of community in this online course, we have established a “discussion board” on Canvas that will permit students to share their ideas about psychology with each other, and get some feedback from the group. For this purpose, students have been assigned to "sections" of approximately 30 students, roughly analogous to on-campus discussion sections.

For each module in the course, we have proposed a question for discussion. By the deadline indicated in the syllabus, you should post a response to the question posed. It doesn’t have to be long: 50 well-chosen words will do, and responses shouldn’t be longer than 250 words (the equivalent of one page, double-spaced, 12-point type). All we ask is that you respond to the question thoughtfully. Your comments should be based on what you’ve read in the text, and
what’s been presented in lectures, and your own reflections. It is neither necessary nor desirable that you do any additional reading. Discussion postings are scored on an all-or-none basis, 0, or 5 points, just like a neuron. So long as your comments are on time, responsive to the prompt, and reasonably acceptable from the point of view of grammar and spelling, your responses will earn full credit.

There are 12 such discussion questions, earning five (5) points each. Each is due by 11:59 PM (PST) on the date indicated in the syllabus. That's one minute before midnight, just like Cinderella.

Your postings will be visible to other members of your section – but you will not be able to read theirs until you have posted your own. After students have posted their comments, other section members are encouraged to respond to them, and for the original commentator to respond in turn – in other words, to get a real discussion going. The responses can add points that support the original student’s point of view, for example. It can also be critical, but the criticism has to be constructive. No ad hominem remarks, no simple dismissals. If you offer a criticism, it should be friendly and constructive in nature, as if you were helping your friend or roommate think through a problem.

Within about 1 day of each deadline, credit for completing the Discussion exercise will be posted to the Gradebook.

1. **Introduction.** Introduce yourself to your fellow students in your section (and your GSI!). Tell us your name (and nickname, if you have one), where you’re from (and describe your home town a little), what high school you went to, and what your major (or prospective major) is in college. Then tell us how “General Psychology” fits into your academic program. Are you thinking of majoring in Psychology? How is this course relevant to your personal, academic, or career goals?

2. **Biological Bases of Mind and Behavior.** The successful use of methylphenidates such as Ritalin or Concerta, in the treatment of attention deficit hyperactivity disorder (ADHD) has led to suggestions that these amphetamine-like stimulant drugs could be used to enhance cognitive performance (attention, memory, even intelligence) by people who do not have ADHD or a similar condition. Assume that these “smart drugs” actually work as advertised to enhance cognition in “normal” individuals (which, frankly, is an open question). Is such a use fair? How does the use
of “smart drugs” to enhance cognitive performance in students differ from “blood doping” to increase aerobic capacity and endurance in athletes, and which is prohibited by the International Olympic Committee and other athletic organizations?

3. **Methods and Statistics.** A wealth of data indicates that “actuarial” predictions made by a statistical combination of quantitative data are more accurate than “intuitive” predictions made by a human judge reviewing the same information. In the criminal justice system, it’s sometimes been proposed that decisions made about sentencing, parole, probation, and release be based on statistical predictions of future risk of re-offending, rather than the intuitive judgments of judges, prosecutors, probation officers, and the like. Do you think this is a good direction for policy to take? Why or why not?

4. **Learning.** Pavlov thought that all learning entailed classical conditioning, whereas Thorndike thought the same thing about instrumental conditioning. Given what you know about predictability, controllability, and the role of reinforcement in learning, is there any learning that does not reflect classical and instrumental conditioning, either alone or in combination?

5. **Sensation and Perception.** Jerome Bruner, a pioneering American cognitive psychologist, introduced what he called a “New Look” in perception by drawing attention to the role of mental set, emotion, and motivation in perception. Can we really see the world through “rose-colored glasses”? Can we see only what we want to see? Or are these just metaphors? Provide an example of how either emotion or motivation can affect either the detection of a stimulus or the perception of some object or event.

6. **Memory.** One of the core symptoms of post-traumatic stress disorder (PTSD) is intrusive memory: disturbing, unwanted memories of the traumatic event keep coming back, either in waking life or in dreams. Recently, it has been suggested that this enhancement of memory is due to stress hormones, and that administering certain drugs shortly after a traumatic event could prevent traumatic memories from being consolidated, leaving the victim essentially amnesic for the trauma itself – and therefore, presumably, reducing the likelihood of PTSD. Assuming that this were possible, is it a good idea? Discuss the pros and cons.
7. **Thought and Language.** People don’t always make choices that are in their best interest. For example, given the opportunity to enroll in a tax-sheltered 401(k) retirement plan to which their employers will also contribute, most people don’t “opt in”. As a result, many Americans have not accrued sufficient retirement savings. But if enrolling in such a plan is made the default, so that employees must actively “opt out”, most employees stay enrolled, to the benefit of their later retirement. Both outcomes are predictable, given what we know about the role of heuristics and biases in judgment and decision-making. Some social scientists have suggested that policymakers capitalize on these biases to “nudge” people in the direction of making optimal choices – those which are most beneficial to them (and society). Others argue that this is psychological manipulation is an unacceptable infringement on personal freedom. Evaluate these arguments, and take a position on this issue.

8. **The Trilogy of Mind.** There is increasing evidence that the relatively large amounts of salt, fat, and sugar found in convenience and processed foods not only enhances their flavor, but also encourages overeating and puts consumers at risk for diseases like obesity and diabetes. In view of these considerations, should public-health and other officials issue laws and regulations limiting the size and content of these foods?

9. **Personality and Social Interaction.** Does personality exist in a social vacuum? Can we describe individual differences in personality in the abstract, without reference to social context, the way we describe individual differences in IQ? Or is individual personality inextricably bound up with social interaction? Are there any individual differences in personality that exist independently of the social context?

10. **Psychological Development.** On January 1, 2014, a California law went into effect which permits transgender students in grades K-12 to choose public-school restrooms and athletic teams in accordance with their gender identity, not their biological sex. Opponents of the law argue that this policy will violate the privacy rights of the majority of public-school students. There will be a referendum on this law on the November 2014 ballot. Make a science-based argument concerning this issue, either pro or con, as if you were discussing this with your family at the dinner table.
11. **Psychopathology and Psychotherapy.** California and New Jersey both have laws outlawing “gay conversion” therapy for minors, which attempt to “convert” homosexuals into heterosexuals. The rationale for the law is that (1) homosexuality isn’t an illness and (2) the treatment itself may harm patients, increasing their risk for depression and suicide. Still, some practitioners objected that any such restriction represented an illegal restraint on trade, preventing them from offering their patients certain services. And some parents objected that they were prevented from seeking treatment in the best interests of their children. In New Jersey, one set of parents sued on behalf of their 15-year-old son, who said that he wanted the treatment. Comment on any aspect of this issue from the perspective of scientific psychology. Should providers be able to provide any treatment to their patients, so long as the patients understand the risks involved?

12. **Conclusion.** Philosophers sometimes talk about “folk psychology”, meaning the intuitive ideas about mind and behavior that we all carry around in our heads. One of the goals of scientific psychology is to refine and correct these intuitive notions. Looking back over the course, what one concept, principle, or research finding surprised you the most? How did learning about this fact change your understanding of how our minds work, or why we behave the way we do?

Here’s how to complete a Discussion assignment

- Click on the “Assignments” tab in the navigation bar on the left of the Canvas page.
  - You will then see a set of “Discussions” These are the required Discussion postings.
  - You can also access these assignments by clicking on the “Discussions” tab, and look under “Pinned Discussions”.
    - You will also see a Pinned Discussion labeled “Queries and Comments”, which students will use to post questions and comments concerning course material, as described elsewhere in this Syllabus.
- Click on the link for the current Discussion assignment (e.g., “Discussion #1 – Biological Bases of Mind and Behavior”).
• For administrative purposes, the class has been divided into a number of Discussion Groups.
  o Click on the link for your Discussion group. Post only to your Discussion Group. If you post to a Discussion Group other than the one to which you have been assigned, you may not receive credit for the assignment.

• You will then see the Discussion prompt and a “Reply” box.
  o Type your Discussion posting into this space.
  o Or, better yet, prepare your posting in advance, using your favorite word processor, and copy and paste it into this space.
  o When you are finished, click on “Post Reply”.

• You will not be able to see the postings of other group members until you have posted your own contribution.
  o Afterwards, you will be able to read, and comment on, other group members’ postings. Feel free to make comments on these postings, but remember to be constructive in any criticisms.

ZAPS 2.0 Exercises for Active Discovery Learning (ZAPS-ADL)

In order to provide you with a more active learning experience – something other than sitting in a chair, reading the text, viewing slides, and listening to lecture – we have arranged for you to complete a number of exercises online using the ZAPS 2.0 software. ZAPS 2.0, produced by a group of Dutch psychologists, stands for Zeer Actieve Psychologie, which translates as Very (Inter) Active Psychology. The ZAPS software is purchased from the publisher directly.

The Active Discovery Learning (ADL) component of the course requires nine (9) exercises, one for each major module in the course. They count five (5) points each on an all-or-none basis (just like a neuron). Each is due by 11:59 PM (PST) on the date indicated in the syllabus. That’s one minute before midnight, just like Cinderella. Note that the ZAPS server may run on Eastern Time, but we make three-hour time correction.

Click on the “Assignments” tab in Canvas, and then scroll down to find links to the ZAPS-ADL assignments.
Students will receive full credit for completing each exercise by the deadline announced in the syllabus. Late completions will not receive any credit. Note that the deadlines are all one minute before midnight, just like Cinderella, according to the official time recorded by the computer at the time you logged on. Your participation in these exercises is recorded automatically by the ZAPS server; but as a backup, you should print out each exercise (click “Print Version” on the last screen). If for some reason the ZAPS server fails to record your participation, presenting this printout will ensure that you receive proper credit.

Within about 1 day of each deadline, credit for completing the Discussion exercise will be posted to the Gradebook.

You may do as many additional ZAPS 2.0 exercises as you wish. However, there will be no extra credit given for any ZAPS completed beyond the requirement (to give extra credit in this manner would be unfair to students whose other responsibilities may not give them the time to do more than is required).

ZAPS 2.0 is an online resource. The registration code for this website must be purchased separately through the publisher’s website: https://digital.wwnorton.com/zaps2. Approximate retail price: $30.00.

- Point your browser to the ZAPS 2.0 “landing page”: https://digital.wwnorton.com/zaps2.
  - Click on the big “Z” button on the lower left corner of this page.
- Click on the big green button labeled “Sign In, Register a Code, or Purchase Access”.
- Select “No, I need to register, purchase, or sign up for trial access.
- Click on the green box that says “Register, Purchase, or Sign Up for Trial Access.
- Enter your name, school email (e.g., JohnSmith@berkeley.edu), and create a password.
  - Enter your last ((family) name first, followed by your first name and middle name (or initial).
  - Your password must be at least 8 characters long, and must contain at least 1 upper-case letter.
• Select “I want to purchase access”.
  o Do Not sign up for “180 days of free trial access”.
• Click on the green box that says “Show Purchasing Options”.
• When prompted for a “Student Set ID”, enter 43689.
  o This is important. Without the proper Student Set ID, you will not receive appropriate credit for completing the ZAPS exercises.
  o If you cut and paste the Student Set ID into a webpage, be sure not to enter the leading space ( ) or the following period (.). Otherwise, your Student Set ID will be incorrect, and you will not receive appropriate credit.

Once you have purchased ZAPS 2.0

• First, update your user profile.
  o Enter your name last (family) name first, followed by your first name and middle name or initial.
    • Be sure to enter your last name first, followed by a comma, then your first name and your middle name or initial. Otherwise you may not receive credit for completing the ZAPS exercises. THIS IS VERY IMPORTANT.
    • And be sure to use the same name by which you registered for the class (check how your name is listed in the Gradebook). THIS IS VERY IMPORTANT.
• Our Student Set ID for Summer 2018 is 43689.
  o Be sure to enter the proper Student Set ID, which is case-sensitive, or else you will not receive proper credit for completing the ZAPS exercises.
• ZAPS 2.0 Experiments rely on popup windows, cookies, and JavaScript. Be sure to turn off all popup blockers in your web browser before you try to do anything with ZAPS.

After you enter the site, you will see a long list of ZAPS 2.0 exercises (click on ZAPS Listed Alphabetically”). There are dozens of these, and you may do all the ZAPS 2.0 exercises you want, and you'll learn from each of them. But you are only required to complete the nine specific exercises indicated on this syllabus -- one for each of nine major modules in the course:
There are no assigned ZAPS-ADL exercises for Modules 1, 3, or 12.

- No substitutions are permitted. You will complete additional ZAPS exercises for the Research Participation Experience component of the course, as described below.

- When you finish each exercise, you will see a link, on the left-hand side of the page, for "Further Info". Click on it. At the top of the new page, on the right-hand side, you will see a link for "Print Version". Click on it. You may be asked to enter your name. If so, enter your name.

- Then you will see a page with a complete account of the ZAPS 2.0 exercise you have just completed, without animations, but with your name on it. You may print this out and keep it for your future reference.

- Some ZAPS 2.0 exercises may ask you to input your Student Set ID. But not all of them do. Just follow the instructions, using the Student Set ID given above.

- Your participation in each ZAPS 2.0 exercise will be recorded in the online gradebook. But this is done by hand, and takes time. I have to retrieve the information from the ZAPS server and enter it into the online gradebook by hand. The class will receive an Email notice as soon as the credits for each exercise have been posted. After that time, if your participation has not been properly credited, write me via email and I will recheck the roster. If I cannot find you on my roster, then click on “My Activity” link on the “Explore
ZAPS” page. This will take you to the ZAPS Student Activity Monitor, which will show which ZAPS exercises you have completed, and when. Take a screenshot ("Print Screen") of this page and paste it into an Email addressed to me (use the Canvas mail utility). If the Student Activity Monitor shows that you completed the assignment by the deadline, we’ll give you credit. You will have one day after credits are posted to correct the record.

- You can contact the ZAPS helpdesk for support.

**ZAPS 2.0 Exercises for Research Participation (ZAPS-RPE)**

Because psychology is a scientific discipline, research experience is an integral part of Psychology 1 (and many other lower-division and survey courses in the Department). On campus, this component of the course is satisfied through student participation in the Research Participation Program (RPP). RPP is somewhat analogous to the laboratory sections offered in the natural sciences, except that students serve as subjects rather than experimenters. Although students do contribute data to ongoing research projects, the primary purpose of the RPP requirement is to familiarize students with the methods by which scientific research in psychology is conducted.

Because of the online delivery of this course, to students who may be located far from Berkeley, it is not feasible for students to participate in on-campus research projects. However, a similar experience may be had by completing a subset of ZAPS 2.0 exercises that involve the actual collection of data. In each exercise, you will be asked to participate just as an ordinary research subject would; the exercise also contains an explanation of the experiment and allows you to see that data that has been collected.

The online version of Psychology 1 requires students to complete five (5) such exercises, other than the ones specifically required for ZAPS-ADL. In order to insure variety of research participation experiences, you may select any one from each of the five (5) groups of ZAPS exercises listed below. **You are required to complete only one experiment in each of the five groups.**

Each exercise will take about 15 minutes. For grading purposes, the Research Participation Experience (ZAPS-RPE) requirement is worth 25 points (5 points for each of 5 ZAPS exercises).
Group A – Perception
• “Visual Search”
• “Ponzo Illusion”
• “Face Perceptions”

Group B – Attention
• “Stroop Effect”
• “Attentional Blink”

Group C – Memory
• “Sensory Memory”
• “Memory Bias”
• “False Memory”

Group D – Thinking
• “Analogical Representation”
• “Decision Making”
• “Sudden Insight”
• “Mental Scanning”
• “Implicit Association Test”

Group E – Language
• “Word Frequency”
• “Lexical Decision”
• “Sentence Verification”

Click on the “Assignments” tab in Canvas, and then scroll down to find the link to ZAPS-RPE. Then follow the general instructions for ZAPS-ADL. **Do not create a separate Student Set ID:** use the same User Information for both sets of ZAPS exercises.
As with ZAPS-ADL, described above, you may do as many additional ZAPS-RPE exercises as you wish. However, there will be no extra credit given for any ZAPS completed beyond the ADL and RPE requirements.

You must complete the ZAPS-RPE exercises by 11:59 PM (PST) on Thursday, August 9, 2018. Accumulated credits for ZAPS-ADL will be entered into the Gradebook.

Within about 1 day of this deadline, credit for completing the Discussion exercise will be posted to the Gradebook.

**Online “Synchronous” Office Hours**

Because of the online format of this course, there are no discussion sections as such, and no opportunity to ask questions during lectures. However, the instructor and GSIs will be available in weekly “synchronous” office hours, making use of the “Chat” utility in Canvas. We will announce a schedule of online office hours at the beginning of the course, fully recognizing that students in the course may be widely distributed over many time zones, and making any possible schedule inconvenient for some students. The whole point of online instruction, after all, is to make courses available to students residing far beyond the campus precincts. Still, students who want to take advantage of the online office hours should simply sign on to the Canvas “Chat” facility at the appointed time. Bear in mind, however, that any conversation between student and instructor will be accessible to any student who has also signed onto “Chat”. For this reason, students with personal issues pertaining to the course should communicate with the instructor privately using the Canvas email utility.

**Queries and Comments During the Course**

As a supplement to scheduled office hours, this course offers a “Queries and Comments” discussion board, which should be students’ primary means of communication with the instructor. Students may post any questions or comments that may arise from the lectures, readings – or, for that matter, newspaper and other media stories concerning psychology. The instructor will respond within one business day to any question or comment posted to the “Queries and Comments” discussion board. **Feel free to make use of these resources: that is what we are here for.**
Canvas includes a general discussion area, which will be used for a wide variety of communications among students, GSIs, and the instructor. These messages will be distributed to the entire class, so don’t post anything of a personal or confidential nature! Responses from the instructor or the GSIs also will be posted to the entire discussion board. Do not send questions on course content to the instructor’s private Email address; post them to the course website instead – so that everyone can benefit from the exchange.

- Click on the “Discussions” tab in the Canvas navigation bar.
- Click on “Queries and Comments” link under “Pinned Discussions”.
- Type your question or comment in the “Reply” box. This will initiate a conversation.
- The instructor or a GSI will respond within one (1) business day.
- Other students in the course may chime in, as well.

Feel free to post Queries and Comments. It’s the only way you’ve got to get your questions answered. And answering questions is what we’re here for!

Please do not send questions or comments about course material to the instructor or GSIs via email. Post them to the Queries and Comments discussion board, so that the entire class can have the benefit of the exchange.

If you have a communication of a personal nature, such as a family emergency, you should send private Email to the instructor and your GSI.

From time to time I will post announcements (e.g., about exams) concerning the course; I may also post corrections to my lectures.

**Grading and Course Policies**

Final grades will be calculated on the basis of 340 points distributed according to the following rules:
Letter grades will be assigned according to the following scheme. If necessary, the distribution of final letter grades in this course will be adjusted to conform to the overall distribution of grades in lower-level courses at UC Berkeley. For more details, see the “Exam Information” page of the Lecture Supplements.

- The accumulation of at least 90% of the total possible points (i.e., 306 points) will result in some kind of A (A or A-; I do not give grades of A+ under any circumstances, as it contributes to grade inflation and grade grinding).
- Accumulation of at least 80% of the total possible points (i.e., 272 points) will result in some kind of B (B-, B, or B+).
- Those who accumulate more than 50% of the total possible points (i.e., more than 170 points) are guaranteed some kind of C (C-, C, or C+).
- Those who accumulate more than 25% of the total possible points (i.e., more than 85 points) will receive some kind of D.
- According to UC Berkeley policy, a grade of P corresponds to a minimum letter grade of C-.
If you are intending to major in psychology, note that Psych 1/W1, as a prerequisite for the major, must be taken for a letter grade.

**Intellectual Property Notice**

In this class, you may share any notes you take with other members of this class. You may also record the class, if you wish, as long as that recording is only for use by you and other members of this class. You may not post notes, recordings, class materials, etc., anywhere except on our class websites. Any commercial use of materials from this class is forbidden by University policy and California state law.

**UC Honor Code**

The student community at UC Berkeley has adopted the following Honor Code:

“As a member of the UC Berkeley community, I act with honesty, integrity, and respect for others.” The hope and expectation is that you will adhere to this code.

**Collaboration and Independence:** Reviewing lecture and reading materials and studying for exams can be enjoyable and enriching things to do with fellow students. This is recommended. However, unless otherwise instructed, homework assignments are to be completed independently and materials submitted as homework should be the result of one’s own independent work.

**Cheating:** A good lifetime strategy is always to act in such a way that no one would ever imagine that you would even consider cheating. Anyone caught cheating on a quiz or exam in this course will receive a failing grade in the course and will also be reported to the University Center for Student Conduct. In order to guarantee that you are not suspected of cheating, please keep your eyes on your own materials and do not converse with others during the quizzes and exams.

**Plagiarism:** To copy text or ideas from another source without appropriate reference is plagiarism and will result in a failing grade for your assignment and usually further disciplinary action. For additional information on plagiarism and how to avoid it, explore the following
resources: UC Berkeley Library Citation Page, Plagiarism Section, and GSI Guide for Preventing Plagiarism.

Academic Integrity and Ethics: Cheating on exams and plagiarism are two common examples of dishonest, unethical behavior. Honesty and integrity are of great importance in all facets of life. They help to build a sense of self-confidence, and are key to building trust within relationships, whether personal or professional. There is no tolerance for dishonesty in the academic world, for it undermines what we are dedicated to doing – furthering knowledge for the benefit of humanity.

Your experience as a student at UC Berkeley is hopefully fueled by passion for learning and replete with fulfilling activities. And we also appreciate that being a student can be stressful. There may be times when there is temptation to engage in some kind of cheating in order to improve a grade or otherwise advance your career. This could be as blatant as having someone else sit for you in an exam, or submitting a written assignment that has been copied from another source. And it could be as subtle as glancing at a fellow student’s exam when you are unsure of an answer to a question and are looking for some confirmation. One might do any of these things and potentially not get caught. However, if you cheat, no matter how much you may have learned in this class, you have failed to learn perhaps the most important lesson of all.

In accordance with this new Honor Code, students will be asked to sign the following UC Berkeley Honor Pledge prior to examinations:

“On my honor, I have neither given nor received assistance in the taking of this exam.”

Students with Disabilities

Any students requiring course accommodations due to a physical, emotional, or learning disability must contact the Disabled Students' Program (DSP). They will review all requests on an individual basis.

• Request your Disabled Student Program Specialist to send the instructor a formal request before the official course start date by email

• In addition, notify the instructor and your Online Learning Support Specialist, which accommodations you would like to use.
Your Online Learning Support Specialist is Tracie Allen Littlejohn and her email is summer_online_support@berkeley.edu

## Program-Level Goals for Psychology

As part of a campus-wide project to improve undergraduate education, the Department of Psychology has identified a number of program-level goals which should be addressed by its courses. Here is the current list of goals, as well as a summary of how Psychology W1 intends to meet them.

1. **Understand basic concepts that characterize psychology as a field of scientific inquiry, and appreciate the various subfields that form the discipline as well as things that differentiate it from other related disciplines.**

   This course presents psychology as the scientific study of mind and behavior. It covers the entire spectrum of psychology, including the biological bases of mind and behavior (neural, endocrine, genetic, and evolutionary); basic processes of cognition (learning, sensation and perception, memory, thinking, and language), emotion and motivation; personality and social interaction; cognitive and personality development; psychopathology and psychotherapy.

2. **Develop an understanding of the central questions/issues in contemporary psychology as well as a historical perspective of psychological theories and key empirical data.**

   The course is oriented around basic concepts and principles. In addition to a historical overview of the development of psychology as a science, most major topics are taught with an eye toward the historical progression by which our current understanding of mind and behavior developed.

3. **Develop a thorough understanding of one of the major content areas of psychology (i.e., Social/Personality, Developmental, Clinical, Cognitive, Biological).**

   The course covers all the major content areas in psychology, from basic neuroanatomy and neurophysiology to clinical
application in psychotherapy. It is intended to prepare students for the surveys of major content areas offered in Tier II of the Psychology Major curriculum.

4. Develop skills to critically evaluate the presentation of scientific ideas and research in original scientific papers as well as in the popular media.

Due to the historical organization of many of the lectures, some studies are presented as improvements on or correctives to earlier research, so that students can develop skills of critical analysis through the comparison and contrasting of competing studies.

5. Become familiar with research methods used in psychological research, and become proficient in basic concepts of statistical analyses and familiar with more advanced methods in data analyses and modeling.

The course introduces students to basic experimental and correlational research designs. The fundamentals of statistical analysis are presented at a conceptual (rather than computational) level. Many concepts and principles are illustrated by the classic experiments that initially uncovered them.

6. Learn to develop, articulate, and communicate, both orally and in written form, a testable hypothesis, or an argument drawing from an existing body of literature.

Many of the online laboratory exercises involve students in the active collection of data bearing on a specific hypothesis, replicating a classic psychological experiment.

7. Apply a psychological principle to an everyday problem, or take an everyday problem and identify the relevant psychological mechanisms/issues.

Many of the required discussion postings require students to articulate a position on some issue of public policy, based on relevant psychological research and theory.
End of Course Evaluation

Before your course end date, please take a few minutes to participate in our Course Evaluation to share your opinions about this course.

You will be receiving the Course Evaluation via email. The evaluation does not request any personal information, and your responses will remain strictly confidential.

You may only complete the evaluation once. It will close August 10th, 2018 PST.

*Subject to change.
